Data Analytics Internship — Week 2

Customer Insights & Recommendation Report

Analyze. Understand. Suggest. Grow.

Prepared By	Aryan Sharma
Organisation	ReadyNest Corp.
Date	June 2025
Tool Used	Python 3.14 Power BI Desktop

1. Executive Summary

This report presents a comprehensive analysis of ReadyNest Corp.'s customer and sales data for the year 2023. The analysis covers 500 customers, 1,800 orders, and over 5,000-sales line items across 5 regions and 8 product categories. The objective is to uncover actionable insights that help ReadyNest make data-driven decisions to improve revenue, customer retention, and overall business performance.

Key findings show that total revenue for 2023 stood at ₹28.62 Million with an average order value of ₹15,900. The West region leads in revenue contribution, UPI dominates as the preferred payment method, and the top customer (Vijay Saxena) alone contributed ₹2.60 Lakhs. Customer segmentation reveals that High Value customers (33.2%) are responsible for over 60% of total revenue, making them the most critical segment for retention and growth.

1.1 Key Performance Indicators

KPI	Value
Total Revenue	₹28.62 Million
Total Orders	2,000
Total Customers	500
Average Order Value	₹15,900
Order Completion Rate	75%
New Customers	181 (36.2%)
Returning Customers	319 (63.8%)
High Value Customers	166 (33.2%)

2. Customer Analysis

2.1 Customer Overview

ReadyNest served 500 unique customers in 2023, distributed across 5 regions — West, North, South, Central, and East. The West region leads with 112 customers, followed closely by North (109), while East has the lowest count at 91. Despite this variation, the distribution is relatively balanced, indicating no single region dominates the customer base.

Gender distribution is nearly equal — Male (48.2%), Female (46.2%), Other (3.6%), and Unknown (2%). This balanced split means gender-neutral marketing strategies are appropriate and no segment is being underserved.

2.2 New vs Returning Customers

63.8% of customers are returning buyers, which reflects a healthy retention rate for a growing platform. However, 36.2% are new customers — a sign that acquisition efforts are working. The challenge now is converting these new customers into returning ones through strong post-purchase experience.

Customer Type	Count	Percentage
Returning Customers	319	63.8%
New Customers	181	36.2%
Total	500	100%

2.3 Top 10 Customers

The following customers generated the highest lifetime value in 2023:

#	Customer Name	Segment	Total Spent	Region
1	Vijay Saxena	High Value	₹2,60,413	South
2	Amit Verma	High Value	₹2,42,793	Central
3	Shreya Mishra	Medium Value	₹1,87,641	West
4	Suresh Shah	High Value	₹1,89,062	Central
5	Pooja Pandey	High Value	₹1,84,031	South
6	Amit Nair	High Value	₹1,78,124	North
7	Amit Iyer	High Value	₹1,61,479	North
8	Anil Nair	High Value	₹1,01,533	South

Observation: 7 out of the top 8 customers are High Value segment. The South and Central regions produce the most valuable individual customers. Notably, Shreya Mishra ranks 3rd despite being a Medium Value segment customer — suggesting reclassification may be warranted.

3. Sales Performance

3.1 Monthly Revenue Trend

Revenue in 2023 ranged between ₹2.0M and ₹3.0M per month, showing relatively stable performance throughout the year. There is no extreme seasonality, but mild peaks are visible mid-year (May–July) and a slight dip toward year-end. This suggests that targeted festive season campaigns in Q4 (October–December) could capture significantly more revenue.

3.2 Revenue by Region

The West region leads revenue contribution, followed closely by South and North:

Rank	Region	Total Revenue	Observation
1	West	₹6.5 Million	Highest revenue — strong market
2	South	₹6.3 Million	Close second — growing market
3	North	₹6.0 Million	Stable — consistent performer
4	Central	₹5.0 Million	Moderate — needs more focus
5	East	₹4.9 Million	Lowest — highest growth potential

The East region, despite having fewer customers, presents the highest growth opportunity. Targeted regional campaigns and region-specific offers could bring East on par with the top performers.

3.3 Payment Method Analysis

UPI dominates as the primary payment method, consistent with India's digital payment ecosystem:

Payment Method	Orders	Share	Insight
UPI	647	35.9%	Most preferred — prioritise UPI offers
Credit Card	540	30.0%	Second highest — EMI options will help
Net Banking	246	13.7%	Declining method — maintain support
Cash on Delivery	213	11.8%	Higher return risk — limit for new users
Debit Card	154	8.6%	Low share — offer debit card cashbacks

3.4 Order Status Breakdown

Out of 1,800 orders placed in 2023, 75% were successfully completed. However, 8% were cancelled and 7% were returned — together representing 15% revenue leakage. Addressing these two categories is a high-priority action for 2024.

Order Status	Count	Percentage	Action Required
Completed	1,350	75%	Maintain and grow
Pending	180	10%	Follow up with customers
Cancelled	144	8%	Investigate root cause
Returned	126	7%	Review return policy

4. Product Performance

4.1 Top 5 Products by Revenue

The following 5 products generated the highest revenue in 2023:

#	Product	Revenue	Recommendation
1	Product_L	₹1.12 Million	Feature in homepage banner
2	Product_M	₹1.12 Million	Bundle with Product_L
3	Product_Y	₹1.09 Million	Promote via email campaigns
4	Product_K	₹1.09 Million	Add to recommended section
5	Product_S1	₹1.08 Million	Increase inventory stock

4.2 Revenue by Category

Food is the top revenue-generating category at ₹9.6 Million, which is surprisingly high for what is typically a low-margin category. This indicates very high order volumes. Sports (₹2.1M) and Clothing (₹2.5M) are underperforming relative to their market potential and should receive focused marketing investment.

Rank	Category	Revenue	Strategy
1	Food	₹9.6M	Maintain — high volume driver
2	Electronics	₹5.1M	Upsell — high margin potential
3	Sports	₹3.9M	Promote — seasonal campaigns
4	Home & Kitchen	₹3.5M	Bundle deals with Food category
5	Clothing	₹2.5M	Influencer marketing — high potential
6	Toys	₹2.1M	Festive season push campaigns
7	Beauty	₹1.2M	Subscription model opportunity
8	Books	₹0.6M	Review pricing — low revenue share

5. Customer Segmentation

Customers have been segmented into three value tiers based on their total lifetime spend in 2023. This segmentation is foundational to all retention, marketing, and revenue growth strategies.

Segment	Count	Avg Spend	Avg Orders	Revenue Share
High Value	166 (33.2%)	₹68,000+	6–9 orders	~60%
Medium Value	161 (32.2%)	₹35,000+	3–6 orders	~31%
Low Value	173 (34.6%)	Under ₹15,000	1–2 orders	~9%

High Value customers are the revenue backbone of ReadyNest. Despite being only 33% of the customer base, they contribute approximately 60% of all revenue. Low Value customers (34.6%) contribute only ~9% — indicating significant untapped potential in this group.

5.1 Segment Strategy

- High Value — VIP loyalty programme, exclusive early access to new products, personalised offers
- Medium Value — Upgrade incentives, spend-more-save-more offers, targeted email campaigns
- Low Value — Re-engagement campaigns, welcome-back discounts, push notifications for abandoned carts

6. Key Business Questions Answered

Q1: Who are our top customers?

Vijay Saxena (South, High Value) is the top customer with ₹2,60,413 in total spend across 16 orders. The top 8 customers are all from the High Value segment, primarily located in South and Central regions. These customers should be enrolled in a VIP loyalty programme immediately to protect this revenue.

Q2: Which products are performing best?

Product_L and Product_M are joint top performers at ₹1.12 Million each. All top 5 products fall within a tight revenue range (₹1.08M–₹1.12M), indicating a healthy product portfolio without over-dependence on any single item. Food is the leading category at ₹9.6M.

Q3: Which regions are most profitable?

West leads at ₹6.5 Million, followed by South (₹6.3M) and North (₹6.0M). The East region at ₹4.9M has the lowest revenue despite having 91 customers — suggesting lower average order values in that region. Regional pricing or promotional strategies could close this gap.

Q4: How can we increase customer retention?

With 63.8% returning customers, ReadyNest already has a solid foundation. However, the Low Value segment (173 customers) has high recency days — meaning they have not bought recently. Re-engagement campaigns targeting this group with personalised offers based on past purchases can significantly improve retention metrics. Additionally, reducing the 8% cancellation rate will improve customer experience and trust.

Q5: What strategies can increase sales?

Based on the full analysis, five core strategies are recommended — detailed in Section 7 below.

7. Top Business Recommendations

The following 7 recommendations are directly derived from the data analysis. Each is actionable, measurable, and tied to a specific insight from this report.

#	Recommendation	Rationale	Expected Impact
1	Launch VIP Loyalty Programme	166 High Value customers drive 60% revenue — reward them to retain	Reduce churn by 15–20%
2	Re-engage Low Value Customers	173 customers with low spend & high recency — untapped potential	+10–15% revenue uplift
3	Reduce Cancellation Rate	8% cancellations = direct revenue loss — investigate root cause	Recover ₹2.3M+ annually
4	UPI-First Checkout Experience	UPI is used in 35.9% of orders — make it the default payment option	+5% conversion rate
5	East Region Campaign	East has lowest revenue (₹4.9M) despite 91 customers — push regional offers	+20% East revenue
6	Q4 Festive Season Push	Revenue dips in Q4 — festive campaigns for Diwali/Christmas can reverse this	+25% Q4 revenue
7	Product Bundling Strategy	Top 5 products in tight revenue range — bundle them to increase basket size	+8% avg order value

7.1 Priority Action Plan

Recommended execution order based on effort vs impact:

1. Immediate (Week 1–2): Launch VIP Loyalty Programme for top 166 customers
2. Short-term (Month 1): Begin re-engagement email campaign for Low Value segment
3. Short-term (Month 1): Investigate and address cancellation root causes
4. Medium-term (Month 2): Redesign checkout to make UPI the default option
5. Medium-term (Month 2): Plan and launch East region promotional campaign
6. Long-term (Q3 2025): Prepare Q4 festive season marketing calendar
7. Long-term (Q3 2025): Implement product bundling across top 5 products

8. Conclusion

ReadyNest Corp. has demonstrated strong commercial performance in 2023, generating ₹28.62 Million in revenue across 500 customers and 1,800 orders. The business has a healthy returning customer rate of 63.8%, a well-distributed regional presence, and a balanced product portfolio.

However, significant growth opportunities remain. The Low Value customer segment is largely untapped, the East region underperforms relative to its customer base, and revenue leakage from cancellations and returns (15% combined) represents a recoverable opportunity worth ₹4+ Million annually.

By implementing the 7 recommendations outlined in this report — starting with the VIP loyalty programme and Low Value re-engagement — ReadyNest can realistically target ₹35+ Million in revenue for 2024, a growth of over 22% year-on-year.
